

USING EASYPITCH INTERACTIVE SCREEN TO MANAGE MEASURED BUILDING SURVEYS IN BPW

We originally invested in this screen primarily to grow the area of measured building surveys in our company, but today, we've realised that the screen has many other uses and saves us a lot of time too

FEEDBACK FROM NICOLAS GOIMBAULT

Managing director of Goimbault Ltd, specialised in construction, BPW (Building and Public Works), masonry and tiling.

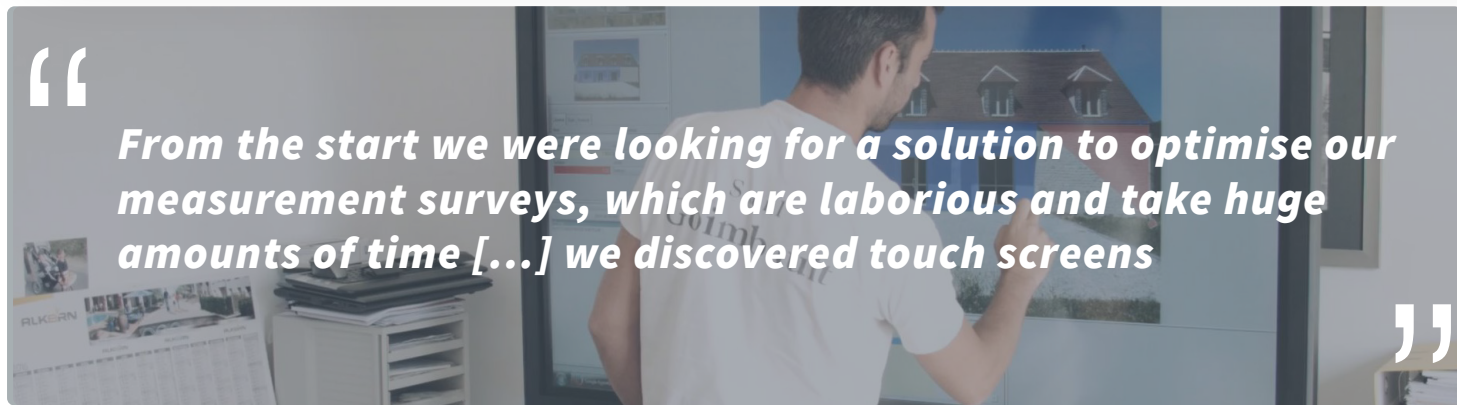

Since 2014, EASYPITCH interactive screens have carved out their place in the French and European markets thanks to their performance and the resounding success of the two ranges of touchscreens, Advance and Pro, aimed exclusively at companies and schools. These interactive touchscreens perfectly address users' needs across all fields. The construction sector, which is highly demanding in terms of support tools due to the complexity of the work involved, has adopted these interactive solutions thanks to their outstanding efficiency.

Goimbault, a family-run business specialising in construction and renovation, decided to acquire an Easypitch interactive screen to meet its needs, defined as successfully finding a support tool tailored to the demands of the job and their clients, but above all, one compatible with their specific surveying software, allowing them to save time and optimise collaboration.

Feedback on this combination of Easypitch screen and surveying software from the testimonial of Nicolas Goimbault, managing director of the Goimbault company.

From the start we were looking for a solution to optimise our measurement surveys, which are laborious and take huge amounts of time [...] we discovered touch screens

The challenges facing Goimbault Ltd. are clear: they need to be able to work quickly and accurately, but above all without making measurement errors, to be able to deliver estimates to clients that are as accurate as possible.

For this reason, they spent a long time searching for a complete, tailored solution that would address all their needs.

Meanwhile, this company at the forefront of innovation sought to digitise its sector using a reliable digital solution.

NEEDS

- Find a work tool compatible with their surveying software
- Facilitate collaboration
- Reduce paper printing
- Save time
- Optimise working practices
- Easily manage schedules
- Improve the visibility of plans and daily tasks

CHALLENGES

- Offer the best services to clients
- Collaborate easily
- Easily address the needs of site managers
- Work quickly and effortlessly
- Be at the forefront of the latest innovations
- Optimised file management

It saves money and above all, is convenient to work with

Interactive screens have successfully met the needs of this BPW company. In fact, thanks to the reliability of these giant touchscreen tablets, they have been able to reduce printing costs, as they no longer need to print out plans for the office, only for the building sites. The large display and screen brightness allow them to work on the plans effortlessly.

In addition, the surveying software combined with the touchscreen saves an incredible amount of time, but more importantly, offers the possibility of error-free ordering from suppliers.

“

The touchscreen coupled with our software saves us time and delivers accuracy of approx. 1/1000th

”

At Goimbault, the visibility of the day's schedule is crucial, which is why the ability to change and fully display schedules on a large screen has won over the company's team.

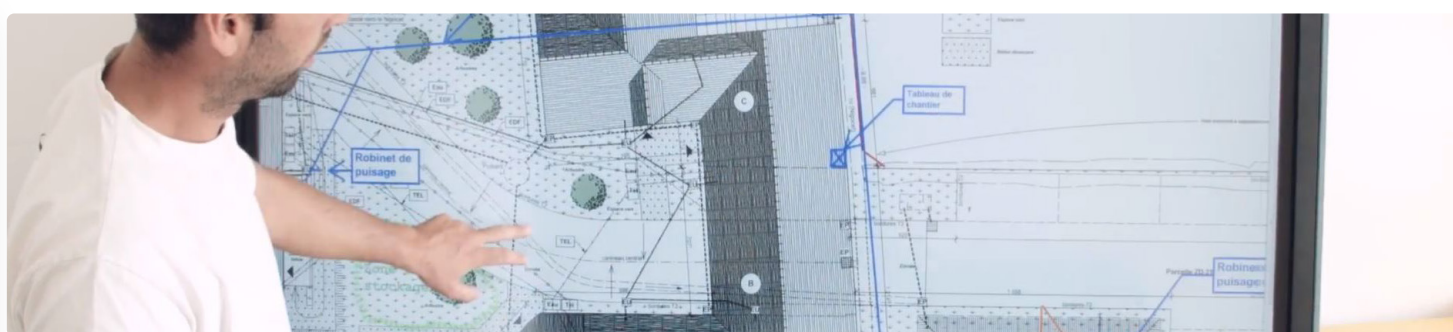

The screen also saves huge amounts of time on plans, managing their documents and files—because such files can now be easily pulled up—so much faster than searching for them through filing cabinets.

BENEFITS

- Optimised project management/ time management
- Better order tracking
- Profitability
- Reduce printing costs
- Remarkable precision and quality in measured surveys
- Unrivalled convenience

ADVANTAGES OF THE EASYPITCH SCREEN

- Touchscreen with 32 points of contact, fostering collaboration
- Ultra High Definition (UHD) for enhanced plan visibility
- Integrated Wi-Fi access point to connect multiple wireless devices
- Fast and intuitive handling

“

With scheduling, when we urgently need to include something in our work plan, we have a much bigger view of the schedule, allowing us to display the entire week from morning to evening, rather than having bits and pieces on a traditional small screen

”

The Easypitch screen is the ideal interactive solution to meet the needs of this sector, which requires the maximum precision possible. As for the Goimbault team, they unanimously agree that they have been far more productive since digitisation in their sector, in this specific case moving from laborious paper-based work using a calculator to working on an interactive touchscreen.

Thanks to all the features of the Easypitch screen—including its 4K UHD display, its touch-sensitive surface with 32 contact points which facilitates collaboration, and its extremely fast and intuitive handling—this time-saving, efficient and precise screen is a must-have.

ABOUT GOIMBAULT LTD

Goimbault is a family-owned company passed down over the generations from father to son and which today counts on more than 60 years of experience in construction and renovation, both in Building and Public Works and in the private sector. Recognised for their know-how and experience, they carry out all types of work from masonry to roof maintenance, from tiling to a range of roadworks and gas and electricity supply networks. The company is founded on the mastery of production techniques and solutions (supervision, site preparation, management and execution of works), all while taking into account the client's budget and expectations.
